The ribozyme library is used in methods for identifying a gene or mRNA by the alteration of a detectable phenotypic claracter and is used for detecting unknown gages responsible for cisplatin sensitivity, regulators, tumour suppressors, cellular factors, apoptotic gene and for target acquisition. Because the tibozyme libraries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          high complexity substantially complete riberyme filtery having a randomised recognition sequence. The libery comprises a collection of advances sociated views (AV), retrovinal or Epstein har views (EV) westers having the left acid expression cassettes encoding 90% or more
                           New recombinant DNA containing between logous sequence contribled by endothedial cell specific regulator. Trum the ERVI date, used to treat, prevent or diamose vascular disease, tumest; also to screen

                                                                                                              New antibodies have been developed which are specific for human parathormone related peptides (hPERP). The antibodies comprise chimeric Lind/or Hichains, where the C region is of buman and L region of mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tals is the incledide sequence of primer HRE Rev. which includes a sequence execution the FLAC epityee. The primer was used with primer HRE Starf (see ANORSY2) in the PCK amplitication of mouse HRE 2 alpha etwA from a mouse brain capillary cubinelial cell canality and library. HRE 2 alpha is a basic helix-to-p-belix FAS domain minorsy by low tactor that is also known as HRE, HRE or EFASI. The
                                   origin. The present sequence represents a primer used in an example of the present invention. Hest cells, transfermed with sectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         invention provides a new revenibinant INA comprising at loast one residency sequence from an interpol of the EAT agency that controls own research in emphasizing the Fig. 11. Since It is not been the first sense of the control of the EAT agency of the Control of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pok product was used in studies to demonstrate that HTF 2 alpha tenthales expression of the marrine ELK 2 demonstrate (See AAVM4224).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      THE TANGEST
